A large part of caring for children is preventative care. Immunizations are an important component of that prevention. As medical science makes important strides, new vaccines are manufactured offering your children protection against illnesses suffered by prior generations.

The enclosed packet contains information about every vaccine currently routinely for your child. Although it has always been our policy to fully explain the immunizations your child receives and answer your questions, we are providing you with additional written information so you may better prepare for your child's vaccinations.

The current vaccination schedule is as follows:

Age	Vaccines
Birth	Hepatitis B #1
2 months	Vaxelis #1/PCV 13 #1/ Oral RotaTeq #1
4 months	Vaxelis #2/PCV 13 #2/ Oral RotaTeq #2
6 months	Vaxelis #3/PCV 13 #3/ Oral RotaTeq #3
12 months	Hepatitis A #1/ PCV 13 #2/ MMR #1
15 months	DTaP #4/ HIB #4/ Varivax #1
18 months	Hepatitis A #2
4-6 years	Kinrix/ MMRV #2
11-12 years	TDaP/Menactra #1/ Gardasil (series of 2)
16 years	Menactra #2
18 years	TDaP

Vaxelis- DTaP/Hep B/Polio/HIB

Kinrix- DTaP/Polio
